

IMPORTATION GUIDE

TWO METHODS :

1. Import manually (ideal for having the workout forever in your Zwift account)
2. Import using Training Peaks (practical and doesn't require a computer)

1. **The manual method** involves importing workouts manually, one at a time, into your favourite virtual cycling platform (Zwift, Rouvy, etc.).

You download the provided workout file and import it each time. This method requires access to a computer where you can install Zwift.

2. **The Training Peaks method** allows you to synchronize training sessions without manipulation automatically. However, note that the workouts will be synchronized only on the day of training, and will be deleted after. You can import the sessions manually later to keep them on your virtual cycling platform forever. This remains a practical option to make sure you have it for the live session.

You will need to connect your Training Peaks account to your Zwift or Rouvy account, etc. This method does not require access to a computer.

***** Note that with the TrainingPeaks method, workouts are synced with Zwift only for the current day (Thursday evening). You will need to import them manually if you want them to stay in your account permanently.**

Manual import for Zwift

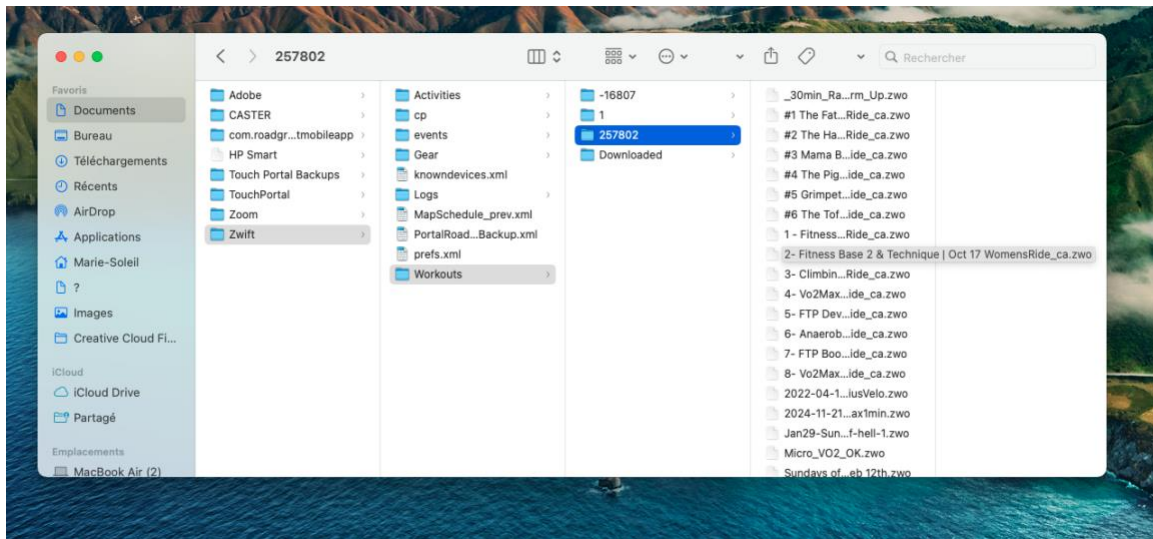

Close the Zwift app if it is open. Close everything!

1- Download the provided file to a computer (save it to the desktop)

2- Open the Documents folder (in Finder on Mac, or Program Files on Windows)

3- Locate the folder named Zwift (this is a folder, not the app), then go to the Workouts folder, then you will find a folder with a series of numbers and/or characters. Drag and drop the file into this folder.

*If you find multiple folders with numbers, it means you have multiple Zwift accounts saved on your computer. You can guess which one is your account by looking at the creation date, or by trying an account and checking (trial and error).

4- Launch the Zwift app on your computer. Once you launch the Zwift app, then the workouts will sync across all your devices. (Apple TV, mobile, etc.)

The workouts will be found under the category “Custom Workouts”.

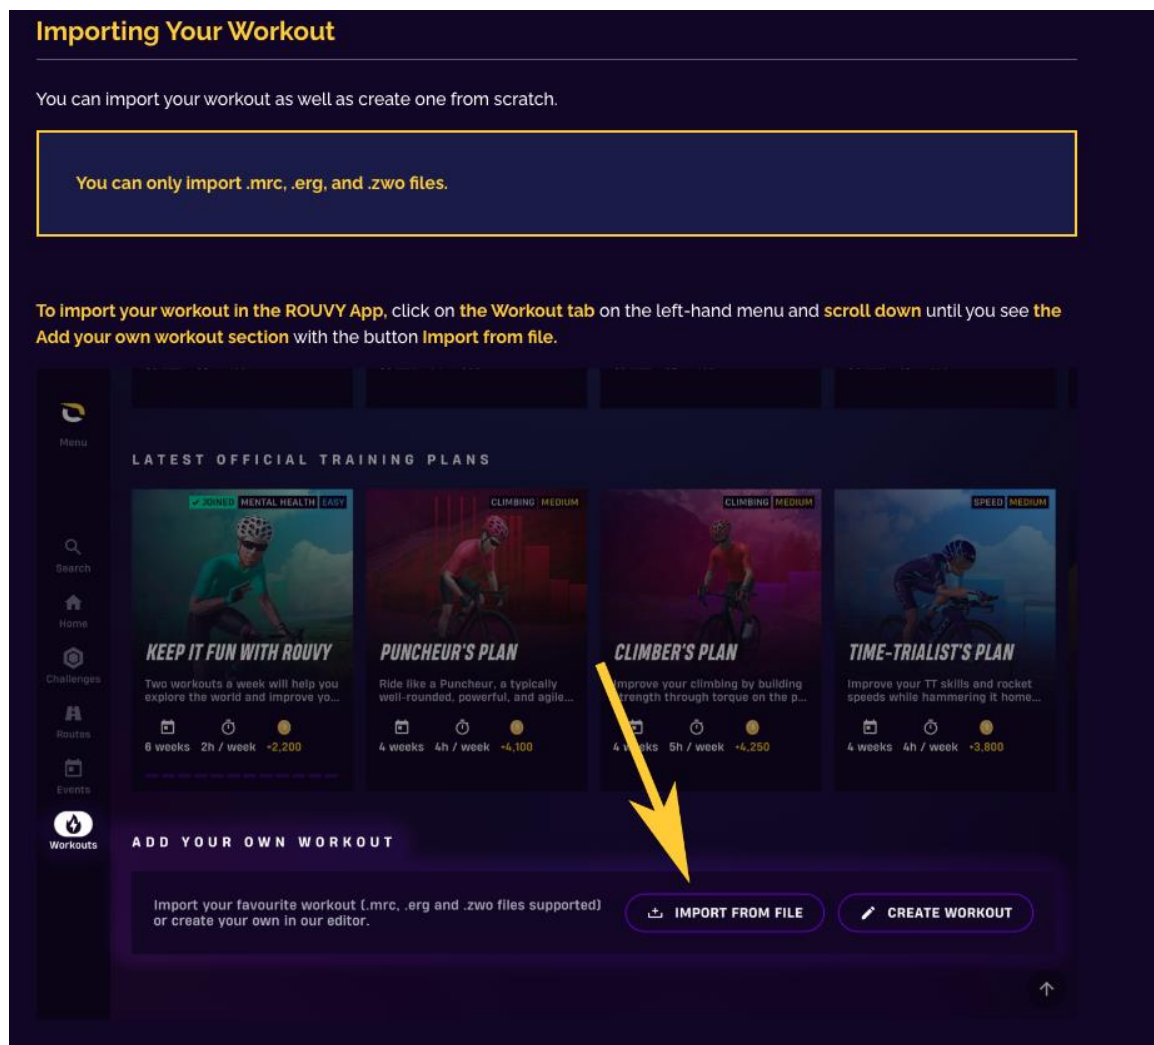

If you can't find the workout, make sure you've completed step #4 to sync the file across all your devices.

Watch these steps in the [instruction video](#)

Manual import pour ROUVY

For Rouvy, you can import files directly into the application on your computer or, on the website when you are logged in to your account.

1. Download the provided file to your computer
2. On the Rouvy website (logged in to your account), see the WORKOUT tab on the left of the screen.
3. Click on import a file

Method #2 - Importation via Training Peaks

Step 1

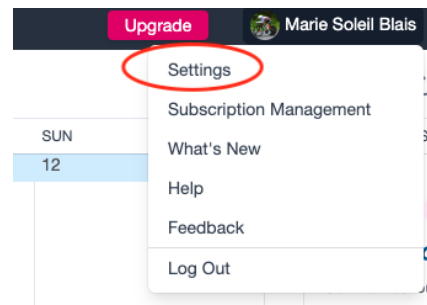

If you DON'T already have an account with Training Peaks, start here.

If you DO already have an account with Training Peaks, go to Step 2

Go to <https://www.trainingpeaks.com/> and open a FREE athlete account.

Step 2: Send me a request to associate your account with my Coach account.

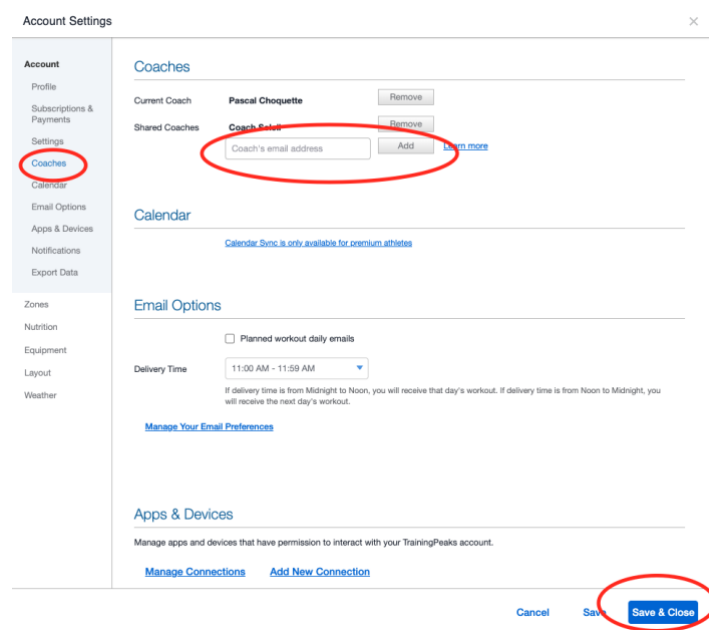

1. On any computer, open the internet and go to the Training Peaks website. Log in to your account. Click on your profile and go to settings.

2. In the left menu "COACH", enter my email address: msb@womensride.ca

If you already have a coach you can add me as a "shared coach".

3. Click SAVE and CLOSE

Please note that I may take a few hours to accept your request. You will see Coach Soleil listed when it is completed on my side.

Step 3: Connect your Zwift (or Rouvy, etc.) account with your Training Peaks account

You can connect your Training Peaks account from the Zwift website (or the Rouvy website for Rouvy).

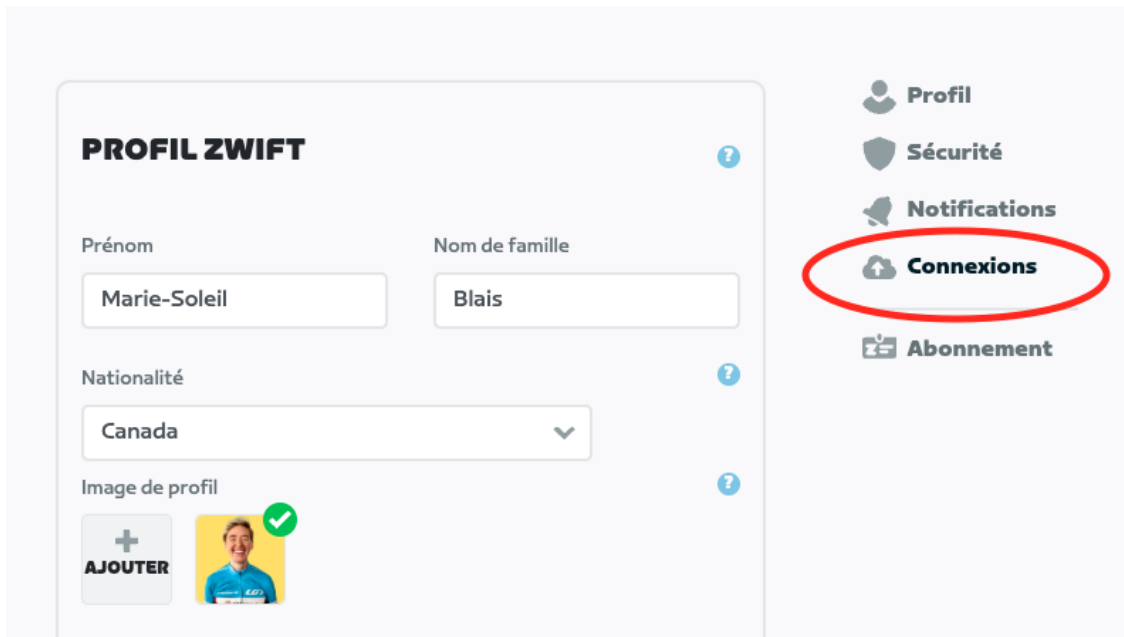

See the instructions on the last page if needed.

Connect your Zwift to Training Peaks

1. Go to [Zwift.com](https://www.zwift.com) website and log in to your Zwift account

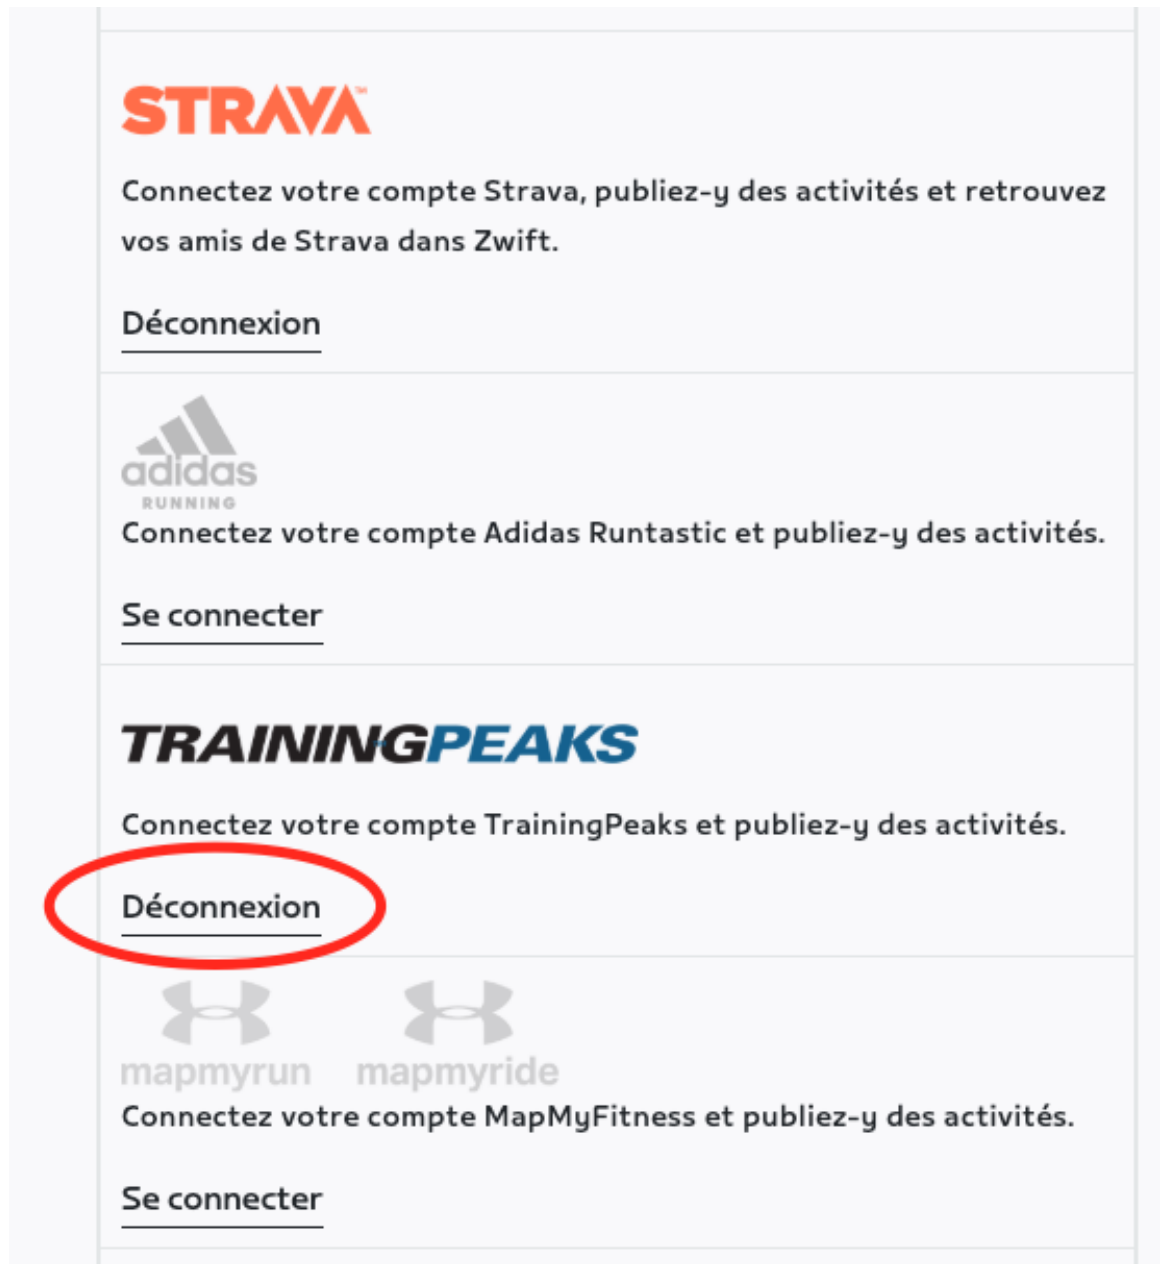

2. From your profile page, go to “Connections” in the right menu.

3. In the list of applications, find Training Peaks and click Connect

Enter your login information for Training Peaks.

If I created an account for you, I will provide you with your login information (you can change it at any time)

*For other platforms (Rouvry etc), proceed in the same way. Go to the platform you would like to connect (example Rouvry, Garmin Connect, etc). Go to settings, then add Training Peaks to your connected applications.
